

Energy Efficient Lighting Service Provider

Lighting Cost Reduction Service is a turnkey design build **energy efficient** lighting contractor servicing the U.S. public and private sector markets. Our company specializes in providing energy efficient lighting solutions for commercial, schools, universities, hospitals, municipalities as well as state and federal entities. Lighting Cost Reduction Service is dedicated to unlocking the cash in your Lighting System by installing **energy efficient** lighting systems.

Lighting Audit Service

The first step to a successful lighting upgrade is the lighting survey or audit. In this stage, which is essential to proper planning, **(LCRS)** gathers and organizes information about the existing lighting system and how it is used.

Collect Financial Information

To conduct a full financial analysis that will be needed to justify an investment in upgrading the existing lighting system, the auditor will gather data about the local utility rate structure and average charges for energy (kWh) and demand (kW). Copies of your latest electric bill will be needed for this process if available.

Determine the availability of rebates from the local utility that may subsidize purchases of energy efficient lighting equipment.

Collect General Information

This process includes general facility history such as year of construction, occupancy patterns and square footage.

Collect Lighting Information

For each area **(LCRS)** Will identify:

- Hours of operation
- Type and size of fixtures
- Number of fixtures
- Number of lamps per fixture
- Number of lamps per ballast
- Type of lamps
- Type of ballasts
- Fixture condition
- Unique fixture types or physical features
- Foot-candle readings as necessary
- Photograph different fixture types for easy identification.

Audit Cost

(LCRS) Audit services range for 1.5 to 3 cents per square foot. The square footage charge for your facility will be evaluated during the initial walkthrough. Factors that determine you square footage cost are facility size, accessibility and how many different fixtures systems will be included in the Audit.
